

Alumina Ceramic Pipe Cone Reducer

Alumina Ceramic Wear resistant ceramic industrial tube are widely used in Mining classifying

Product details:

Hofmann Wear resistant ceramic pipe lining in sleeve form mainly include straight pipes, elbows, Tees, Reducer, etc, and they are used for ceramic lined pipe line and as fittings of pneumatic conveying and slurry pumping system. This lining gives more than 10 times life than any other metallic material. Also it reduces clogging problem due to its smooth surface.

Product advantage:

Cold isostatic pressing gives it very high strength and hardness makes it Maintenance-free operation. Good corrosion resistance to strong acid and alkali. Smooth surface to achieve good flowability and to avoid plugs. It is a kind of ideal products resistant to wear and corrosion in bulk material conveying. **Wear resistant Ceramic** pipe / Sleeves widely used in lining, in Mineral Processing, Cyclone, pipe work, coal processing, ash pump, liquid aluminum material conveying process.
